

Where Can You Get An \$80,000 ESCA System PLUS A \$60,000 Thin Film Analyzer For Less Than \$100,000?

At PHI, that's where.

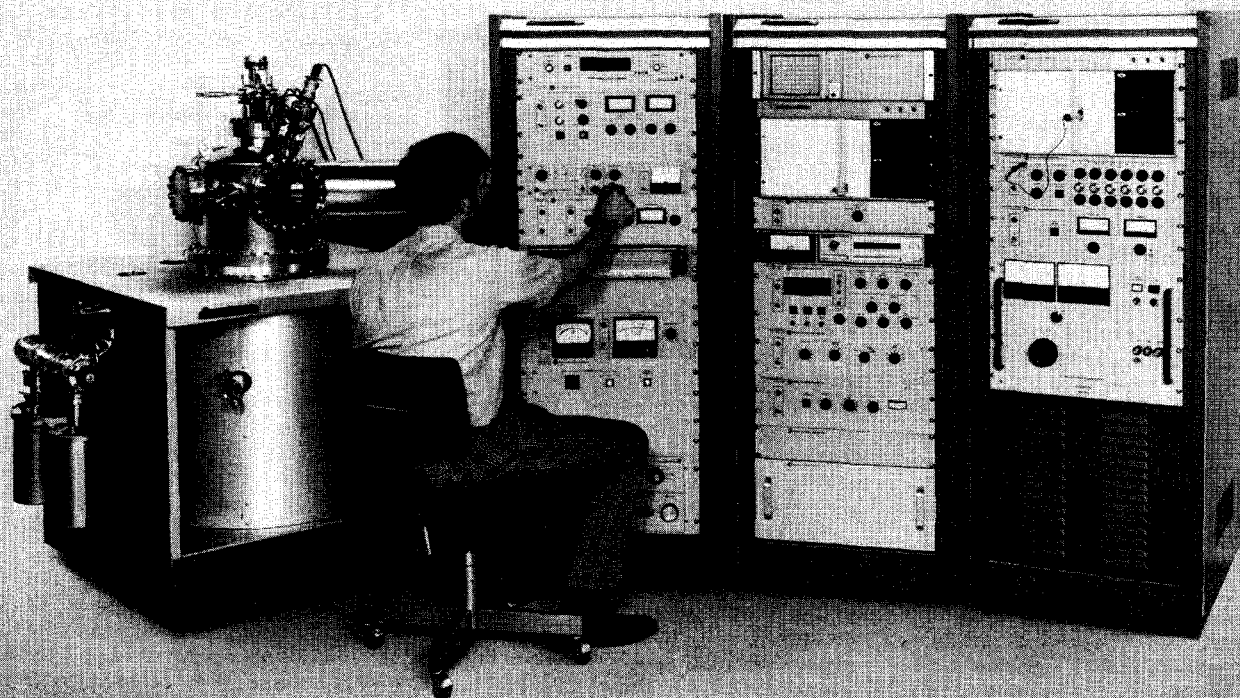

It's called the PHI Model 548 ESCA / Auger Electron Spectrometer. It's not an ESCA system with Auger attachment, and it's not an Auger system with ESCA attachment. It's two complete instruments in one, designed for convenient operation in either mode. It provides you with the speed, spatial resolution and auto-

matic thin film analysis of Auger as well as the low specimen damage and chemical binding information of ESCA.

It also includes important features like convenient handling of multiple, "real-world" specimens, simple operation and "updateable" design which are typical of all PHI systems.

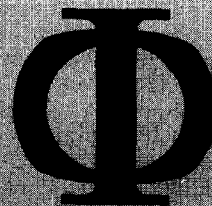

The PHI Model 548 ESCA / Auger Electron Spectrometer is truly a unique addition to the field of surface analysis instrumentation. One that you should consider if you're planning to add surface analysis to the capabilities of your lab. If you still need more convincing...
